

Give every AI action an accountable owner.

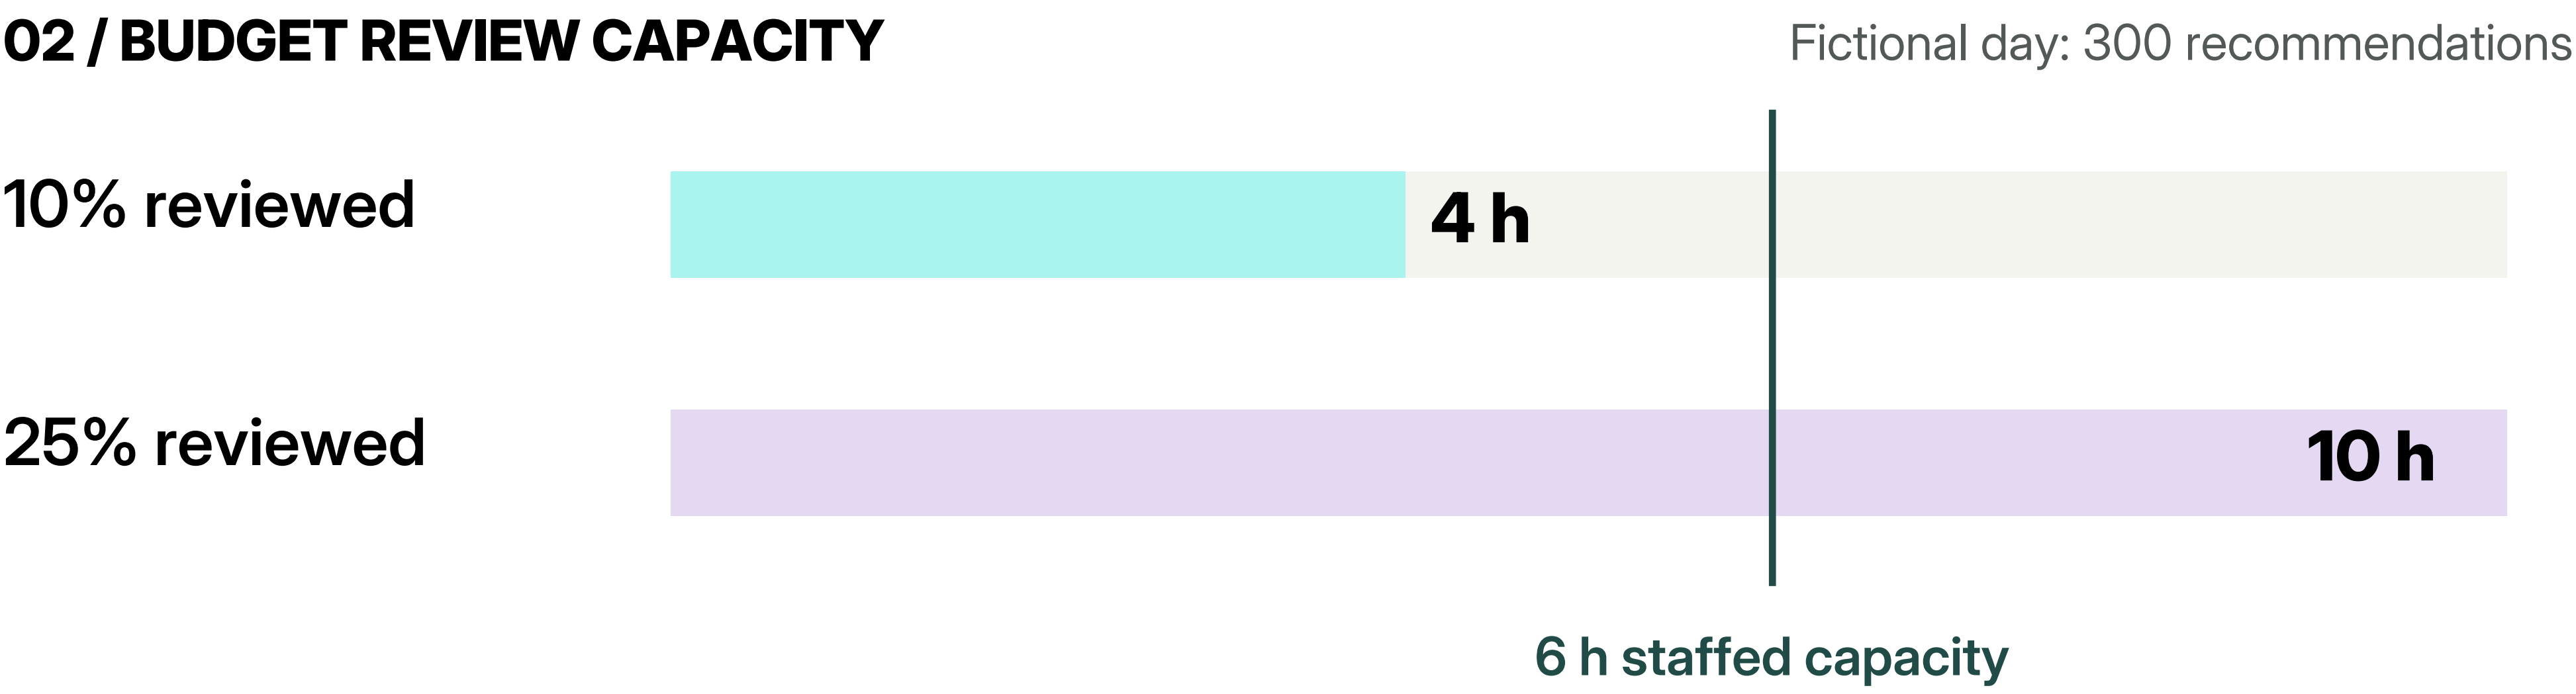

Define who can approve, stop, correct and recover the workflow.

01 / NAME THE PEOPLE WHO CAN ACT

Business owner Defines permitted use and consequences.	Reviewer Checks the evidence and escalates.
System owner Limits actions and keeps an audit trail.	Recovery owner Can pause, correct and restore the process.

02 / BUDGET REVIEW CAPACITY

At eight minutes per review, the second scenario adds four hours of backlog every day. A review rule needs real staffing.

Design for approval, stopping and recovery.
Match privacy and legal controls to the entity, data and jurisdiction.

A selected review sample does not estimate the error rate of every AI recommendation.

Fictional workload, not a recommended sampling policy. Legal scope depends on data, entity, sector and jurisdiction. Confirm the applicable privacy and sector rules before deployment.
